

COMPLETE GREEN STREETS GUIDE

- **A Guide for Building Better Streets**
- Building a transportation system that reflects *community values while moving people*.
 - Human Centered Streets
 - Right-sized Streets
 - Green Infrastructure

PRINCIPLES OF COMPLETE GREEN STREETS

- Complete Streets are for everyone, no matter who they are or how they travel.
- There is no one design of a Complete Street. Each street design considers the specific context of the community, neighborhood & street.
- A Complete Street is designed & operated in a way that prioritizes safety, comfort, and access for people.
- Green Streets are part of a healthy, equitable design so we are designing for resilience.

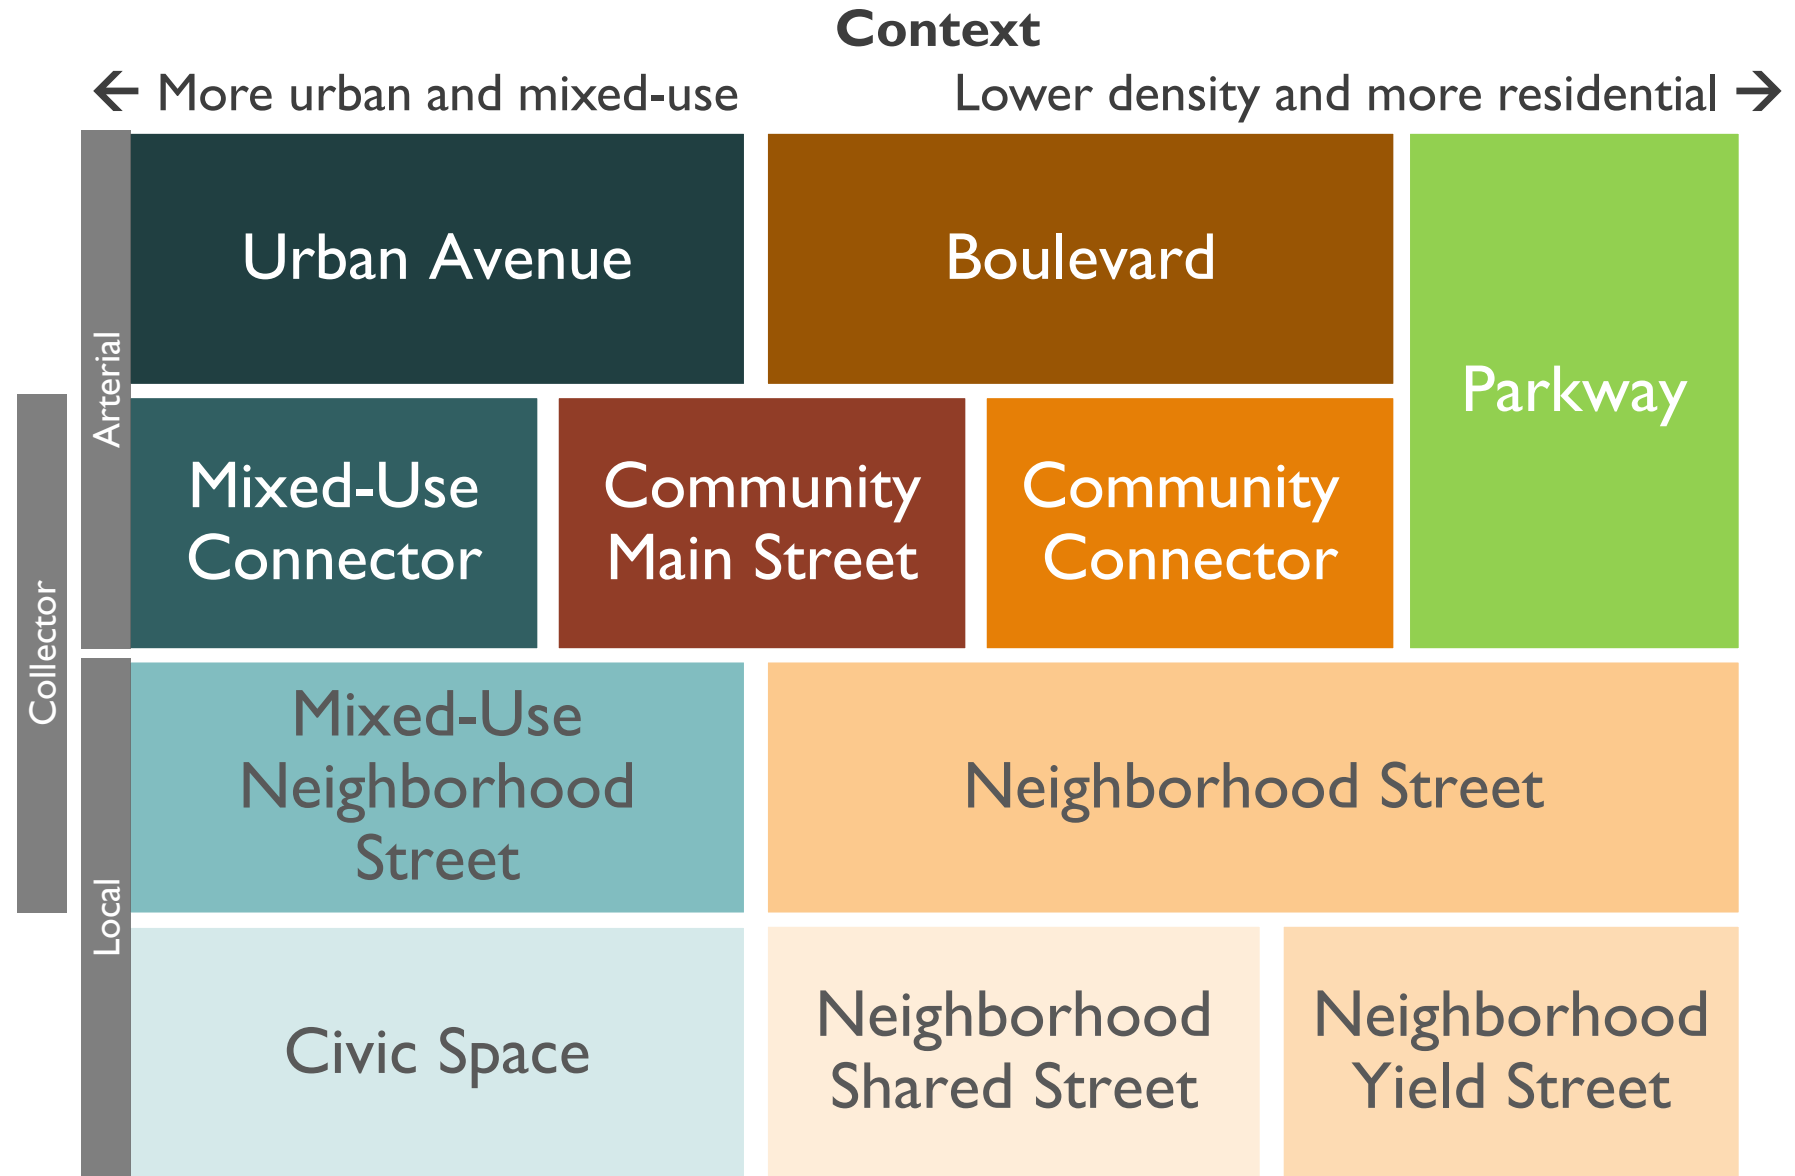

Street Types

CGS is built around a collection of **11 street types** that describe the spectrum of current and future streets in Madison. They serve as **starting points for street design**.

The types are based on **context** and the amount of varied activity occurring.

They are intended to be **aspirational**.

PROJECT IMPACT

- Better understanding for all involved from the project start
- Staff know how to explain our decision making and design process
- Streets that align with our City goals
