

Better cities start with better transit.

Big city, small town, anywhere in between: transit is what keeps people moving, and brings everything a city has to offer within reach. When city leaders take control over this vital resource, the impact can be transformative for communities — and can help leaders realize their vision.

What can tech-powered transit do for cities?

Boost the local economy.

Innovative transit improves job access, shortens commutes, and attracts new city investments.

Level the playing field.

Alleviate food deserts, raise health outcomes, and bring education within reach.

Build a more livable city.

Clear the streets of traffic jams and stop worrying about parking. For good.

Own your infrastructure.

Deliver mobility where it's needed, at your pace and within your budget.

Major news outlets are taking notice of innovative transit:

“South Dakota city focuses on innovation with new transit provider”

“On-demand ride-sharing services, vans and shuttle buses have spread to at least 100 U.S. cities”

“Camden rolls out a new transportation option”

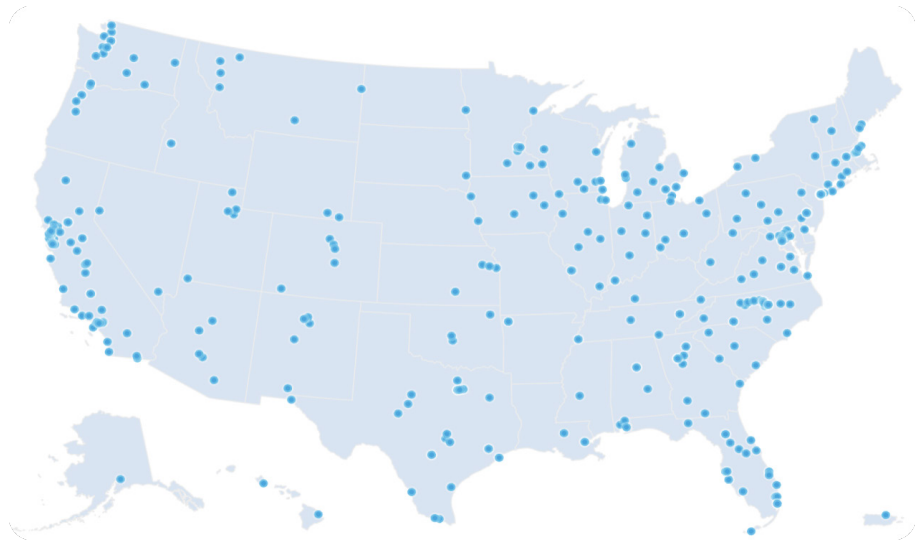

“\$1.50 for a van to go anywhere within city limits”

Join hundreds of cities taking control of transit.

Communities across America are solving civic challenges with tech-enabled transit. Here are just a few of their stories:

Jersey City connects affordable housing with opportunity.

A visionary mayor and his team worked with Via to launch an on-demand microtransit service to enhance transit coverage in areas underserved by rail and fixed-route buses. Four years and two million rides later, 42% of trips begin or end near an affordable housing location, and 45% at a fixed-route transit stop.

Cupertino complements commuter rail with on-demand EVs

In the heart of Silicon Valley, car-dependence clogs streets and harms the environment. A city transit team sought to enhance car-free access to workplaces and local rail hubs — and with Via's help, secured a \$8.5 million grant to launch a first- and last-mile EV microtransit service.

Birmingham improves job access for riders of all abilities.

With accessible transit in short supply outside of downtown, Mayor Randall Woodfin and his administration teamed with Via to enhance job access by 79% with on-demand microtransit. The service is a game-changer for vulnerable residents, 42% of whom report an income below \$25k and 17% of whom report a long-term disability.

Part of a whole network approach.

Via offers microtransit, paratransit, transportation planning, and consulting services to help solve the unique challenges in your community — and make an impact quickly. We can tailor a bespoke solution for you and launch in a matter of weeks.
