

Infrastructure Results Residents can See

The Problem

America's infrastructure is falling behind — roads and sidewalks are aging faster than cities can maintain them.

- *The latest ASCE report card: **D+ for roads.***
- *Poor roads cost residents **\$1,400+ per year** in vehicle wear, delays, and safety risks.*
- *Cities don't have the **staff or budget** to keep up — maintenance is reactive, not proactive.*

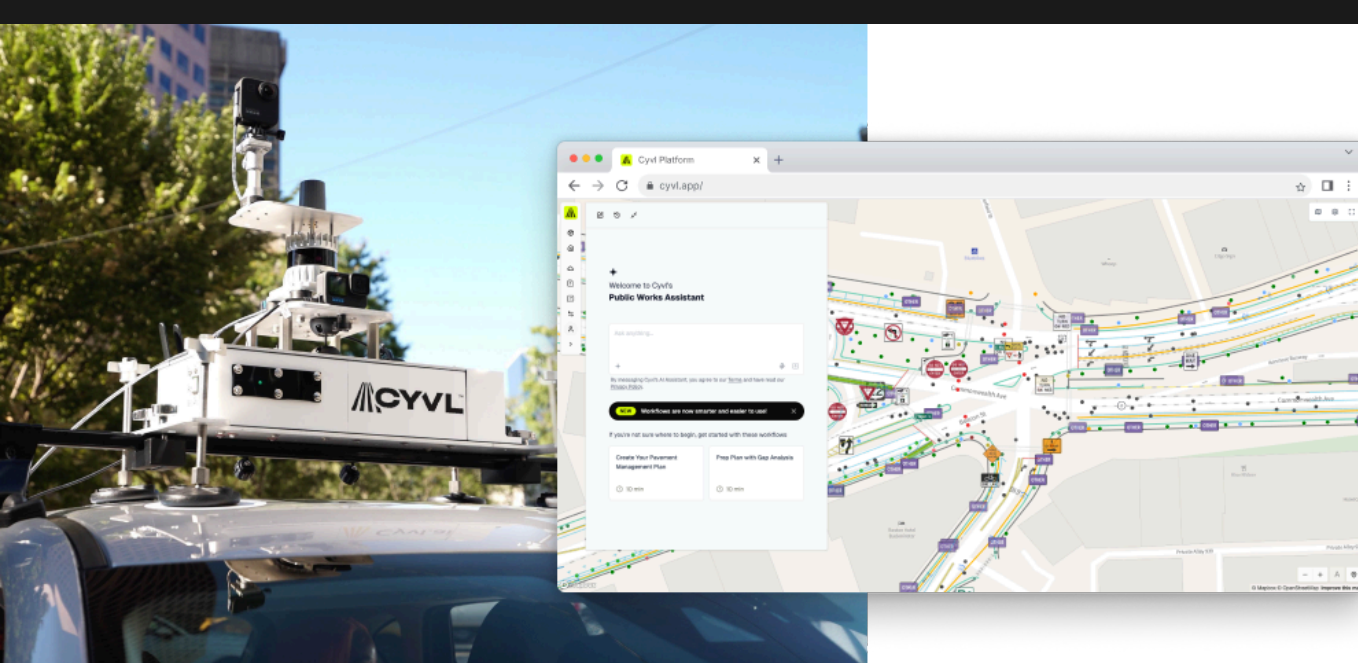

The Vision and Solution

Cyvl helps **300+ cities**, including **5 of the 25 largest**, act proactively on infrastructure issues so they repair faster and keep streets safer.

We give DPWs clear, data-backed insights that build trust with mayors, city managers, and the public.

Better Roads, Improved Coordination, More Trust

Every city hall faces the same truth: budgets are tight and expectations are rising. Cyvl changes that equation.

Trust through Transparency

Show residents the data behind every decision and prove good stewardship of taxpayer funds

Safer Roads & Neighborhoods

Identify and address risks before they become citizen complaints or safety incidents

Visible progress

4-5X more miles repaired, fewer potholes, and faster fixes with the same dollars

One team, one truth

Strengthen coordination between DPW and City Hall with shared, real-time infrastructure insights

Success Stories

Glasgow, MT

Small Town Innovation

80%+ cost reduction in pavement management planning using Cyvl data

Maple Grove, MN

Suburb Budget Efficiency

Maintained **four times more roadway**, from 5 to 20 miles — on a shared data foundation
